

■ Image Upload Guidelines (Admin Panel)

Welcome to the **Shyamsevaa** Admin Content Guide. To maintain a premium and consistent look across our platform, please follow these guidelines when uploading images for various sections.

■ Quick Reference Table

Section	Ideal Aspect Ratio	Recommended Size (PX)	File Format
Temple Banners (Hero)	21:9 or 16:9	1920 x 1080 (Full HD)	WebP / JPG
Puja Service Cards	4:3	1200 x 900	WebP
Chadawa / Offerings	16:10	1280 x 800	WebP
Products (Shop)	4:3	1200 x 900	WebP
Gallery Images	3:2 or 4:3	1200 x 800	WebP

■ Detailed Specifications

1. Temple Banners (Main Slider)

These are the large images shown at the top of the Home page and Temple Detail pages. - **Why?**: They span the full width of the screen. - **Ratio**: Wide (21:9 is best for large screens, 16:9 is standard). - **Tip**: Keep the main subject (deity/temple) centered, as the sides might get cropped on smaller mobile screens.

2. Puja & Product Cards

Used in lists where multiple items are shown together. - **Why?**: A **4:3 aspect ratio** ensures all cards look uniform and professional. - **Tip**: Use clear, bright lighting. Products should have minimal background distractions.

3. Chadawa (Offerings)

These use a slightly wider **16:10 ratio**. - **Why?**: It allows more space for horizontal elements while keeping the "Sacred Heritage" aesthetic.

■ SEO & Accessibility

Google and other search engines cannot "see" images. They read the **Description** and **Title** fields you fill in the Admin Panel.

1. **Alt Text:** When you upload an image for a Temple, ensure the **Description** field contains keywords like "Ancient Shiva Temple in Varanasi".
 2. **Naming Convention:** Before uploading, rename your file from `IMG_1234.jpg` to something descriptive like `kashi-vishwanath-temple-main.webp`. This helps with Google Image Search!
-

■ Performance Optimization (Very Important)

To keep the website fast (Lighthouse Score 90+), please follow these technical rules:

1. **Format:** Use **.webp** if possible. It provides high quality with significantly smaller file sizes.
File Size:
 - **Banners:** Try to keep under **500 KB**.
 - **Cards/Products:** Try to keep under **150 KB**.
 3. **Tool Recommendation:** Use [Squoosh.app](#) or [TinyJPG](#) to compress your images before uploading.
-

■ Learning Corner for Developers (The "Why" Behind Code)

How the Frontend Handles Your Images

- **aspect - 4/3:** This forces a fixed ratio. If you upload a square image, it will be cropped automatically.
- **object - cover:** This is a CSS property that ensures the image fills the container without stretching. It zooms in slightly rather than distorting the image.
- **object - center:** We keep images centered by default so that important parts aren't cut off.

The "Asset" Utility

All images go through our `getAssetUrl` helper in `src/utils/assets.js`. This ensures that whether we are on Localhost or Production, the images load correctly from the server.
